

# Fire Protection during construction checklist

All FAP applications for projects that involve construction work in a building with occupied areas are required to answer the following questions:

Project Name: \_\_\_\_\_

Contact Name and phone number: \_\_\_\_\_

1. Will there be any penetrations of an existing floor to floor fire separations or an exit stair fire separation?	<input type="checkbox"/> Yes <input type="checkbox"/> No
2. Will any existing exits that serve occupied areas be blocked or obstructed during construction?	<input type="checkbox"/> Yes <input type="checkbox"/> No
3. Will the sprinkler system in the construction area be shut down for more than 8 hours during construction.	<input type="checkbox"/> Yes <input type="checkbox"/> No
4. Will the sprinkler system in the occupied areas be shut down form more than 8 hours during construction.	<input type="checkbox"/> Yes <input type="checkbox"/> No
5. Will any fire alarm devices be shut-down for more than 8 hours during construction.	<input type="checkbox"/> Yes <input type="checkbox"/> No
6. Will there be any hot-work permits during construction.	<input type="checkbox"/> Yes <input type="checkbox"/> No
7. Will any Fire Extinguishers or AEDs be removed, relocated or made inaccessible during construction. If so which ones:	<input type="checkbox"/> Yes <input type="checkbox"/> No

If any of these questions are a "yes" then a fire safety plan addressing the degree to which Section 5.6 of the National Fire Code of Canada (NFC) will be applied must be reviewed and accepted by the Independent Professional.
